

Customer Journey Map — Raising & Resolving a Support Ticket

SID: SWUID2026230011

SCENARIO

Discovering the support channel, registering, raising a ticket, tracking it to resolution, and rating the experience.

	Entice How does the customer become aware they need support?	Enter What happens as they begin the process?	Engage What happens in the core support moments?				Exit What happens as the ticket finishes?	Extend What happens after resolution?
Steps What does the customer typically experience?	Issue occurs Customer faces a problem with the product/service and needs help.	Visit the portal Opens the Customer Care Registry web or mobile app.	Register / Log in Signs up with email/password or logs in if already registered.	Raise a ticket Selects a category, writes a description, attaches a screenshot, submits.	Agent responds Agent is alerted, reviews the ticket, replies or asks for more info.	Track status Checks the dashboard for Open / In-Progress / Resolved status.	Ticket resolved Agent marks it Resolved; customer gets a confirmation notification.	Rate the experience Gives a star rating and optional comments; sees ticket history in profile.
Interactions People, places, and digital touchpoints	Product itself, warranty card, previous invoice/email.	Landing page of the CCR web/mobile app.	Registration form, confirmation email, login form.	Ticket form, category dropdown, file upload.	Agent dashboard, email/push notification, in-app chat.	"My Tickets" page, status badges, push notification.	Resolution note, confirmation email, in-app banner.	Feedback modal, star rating widget, profile ticket history.
Goals & Motivations "Help me..." or "Help me avoid..."	Help me find where to report this issue.	Help me get to the right place quickly.	Help me get in without repeating my details every time.	Help me describe my issue easily and quickly.	Help me get a response quickly.	Help me know exactly where things stand.	Help me confirm my issue is actually fixed.	Help me share how the experience felt.
Positive Moments Enjoyable, delightful, or reassuring	Relief that a dedicated support channel exists.	Clean, simple landing page builds trust.	Quick one-tap Google sign-in option.	Clear confirmation: "Ticket #CCR-1042 created".	Fast first response builds confidence.	Real-time status updates are reassuring.	Clear closing summary feels complete.	Feels heard; can see full ticket history in profile.
Negative Moments Frustrating, confusing, or costly	Frustration and confusion about who to contact.	Unsure whether login is required just to browse FAQs.	"Forgot password" flow is not obvious.	Long list of categories is confusing.	No response on day one feels like being ignored.	Status stuck on "In-Progress" for days with no note.	Ticket auto-closed without confirming customer is satisfied.	Feedback prompt feels repetitive for every small ticket.
Areas of Opportunity How might we make this better?	Show the support link prominently on the product/app.	Allow guest ticket tracking without mandatory login.	Add OTP-based login and a clearer "forgot password" link.	Auto-suggest a category using keywords the customer types.	Auto-acknowledge instantly with an expected response time.	Add an estimated resolution time and progress notes.	Ask the customer to confirm resolution before auto-closing.	Send personalized tips from ticket history to prevent repeat issues.
