

Project Design Phase Problem - Solution Fit Template

Date	11 July 2026
SID	SWUID2026230011
Project Name	Customer Care Registry (MERN Stack)
Maximum Marks	2 Marks

Problem - Solution Fit Template:

The Problem-Solution Fit simply means that the customer's problem has been correctly identified, and that the solution proposed — the **Customer Care Registry** — actually solves that problem. It helps identify behavioural patterns in how customers currently seek support, and recognize what would work and why.

Purpose:

- Solve the problem of scattered, untracked customer complaints in a way that fits how customers already behave.
- Succeed faster by tapping into existing channels — email, phone, web/mobile app — that customers already use.
- Sharpen communication so customers know exactly where to log and track an issue.
- Increase touch-points by making the registry the trusted, single place to raise and resolve issues.
- **Understand the existing support situation in order to improve it for customers, agents, and admins.**

Canvas (filled for Customer Care Registry):

CC Info CS, Def BE cap on Foc EM & TR Ident	1. Customer Segment(s) Who is your customer? Small & medium business support teams; end customers of those businesses who need after-sales help.	6. Customer Constraints What limits their choice of solutions? Limited budget for paid helpdesk tools; staff not very tech-savvy; need access from both web and mobile; data-privacy compliance.	5. Available Solutions What have they tried already? Phone/email based support; spreadsheets to log complaints manually; generic helpdesk SaaS (Zendesk/Freshdesk) — often costly and complex for small teams.
	2. Jobs-to-be-done / Problems Which problems do you address? Customers need a simple way to log a complaint and track its resolution. Businesses need to spot recurring issues and measure agent performance. Lack of a central log means customers repeat their story every time.	9. Problem Root Cause What is the real reason this exists? Support is handled over scattered channels — calls, emails, WhatsApp — with no shared log, so tickets get lost or duplicated and no one is accountable for a resolution.	7. Behaviour What does the customer do today? Customers call/email/message support repeatedly for updates; agents track issues in spreadsheets or notebooks; managers manually compile monthly reports.
	3. Triggers What triggers customers to act? A recurring similar complaint; a manager demanding a report; slow response on a past issue; noticing a competitor offers better, trackable support.	10. Your Solution Current / proposed solution Customer Care Registry — a MERN stack web application that centrally logs, assigns, tracks and analyzes customer tickets and feedback, with role-based dashboards for Customer, Support Agent and Administrator.	8. Channels of Behaviour 8.1 Online / 8.2 Offline Online: web/mobile app dashboard, email & push notifications. Offline: phone escalation for critical issues, in-person hand-off notes.
	4. Emotions: Before / After How do customers feel when facing / after resolving a problem? Before: frustrated, ignored, unheard, forced to repeat the same story to multiple people. After: reassured, valued, confident the issue is tracked and will be resolved — use this shift in the app's tone of voice and design.
