

CUSTOMER CARE REGISTRY

Problem - Solution Fit Canvas

SID: SWUID2026230011

CC Info Def CS, BE Cap on Foc	1. Customer Segment(s) CS Who is your customer? Small & medium business support teams; end customers of those businesses who need after-sales help.	6. Customer Constraints CC What limits their choice of solutions? Limited budget for paid helpdesk tools; staff not very tech-savvy; need access from both web and mobile; data-privacy compliance.	5. Available Solutions AS What have they tried already? Phone/email based support; spreadsheets to log complaints manually; generic helpdesk SaaS (Zendesk/Freshdesk) — often costly and complex for small teams.	Exp AS, BE RC Understand CH offline & online Extract
	2. Jobs-to-be-done / Problems J&P Which problems do you address? Customers need a simple way to log a complaint and track its resolution. Businesses need to spot recurring issues and measure agent performance. Lack of a central log means customers repeat their story every time.	9. Problem Root Cause RC What is the real reason this exists? Support is handled over scattered channels — calls, emails, WhatsApp — with no shared log, so tickets get lost or duplicated and no one is accountable for a resolution.	7. Behaviour BE What does the customer do today? Customers call/email/message support repeatedly for updates; agents track issues in spreadsheets or notebooks; managers manually compile monthly reports.	
	3. Triggers TR What triggers customers to act? A recurring similar complaint; a manager demanding a report; slow response on a past issue; noticing a competitor offers better, trackable support.	10. Your Solution SL Current / proposed solution Customer Care Registry — a MERN stack web application that centrally logs, assigns, tracks and analyzes customer tickets and feedback, with role-based dashboards for Customer, Support Agent and Administrator.	8. Channels of Behaviour CH 8.1 Online / 8.2 Offline Online: web/mobile app dashboard, email & push notifications. Offline: phone escalation for critical issues, in-person hand-off notes.	
EM & TR Ident	4. Emotions: Before / After EM How do customers feel when facing / after resolving a problem? Before: frustrated, ignored, unheard, forced to repeat the same story to multiple people. After: reassured, valued, confident the issue is tracked and will be resolved — use this shift in the app's tone of voice and design.			

Purpose / Vision — Customer Care Registry: a single, trusted place for customers to log, track, and resolve support issues.
