

Functional & Performance Testing Template
Model Performance Test

Date	4 July 2026
Team ID	
Project Name	Customer Care Registry
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Home Page Response Time	Open the application homepage and measure the page loading time.	Homepage loads within 2 seconds.	Homepage loaded in 1.3 seconds.	Pass
FT-02	Priority Prediction Response Time	Enter valid ticket indicator values and click Predict. Measure the response time.	Prediction generated within 3 seconds.	Prediction generated in 1.9 seconds.	Pass
FT-03	Concurrent User Load Test	Simulate 50 concurrent users submitting prediction requests.	Application handles all requests without crashing.	Successfully handled 50 concurrent users.	Pass
FT-04	High Load Test	Simulate 100 concurrent users accessing the application simultaneously.	Server remains responsive with acceptable response time.	Average response time was 3.2 seconds.	Pass
FT-05	Continuous Request Test	Send prediction requests continuously for 10 minutes.	Application remains stable without memory leaks or failures.	System remained stable throughout the test.	Pass
FT-06	CPU Utilization Test	Monitor CPU usage during heavy prediction requests.	CPU utilization remains below 80%.	Maximum CPU utilization was 55%.	Pass
FT-07	Memory Utilization Test	Monitor memory consumption during continuous operation.	Memory usage remains below 70%.	Maximum memory usage was 60%.	Pass
FT-08	API Response Performance	Send requests directly to the Flask API endpoint.	API responds successfully within 2 seconds.	Average API response time was 1.6 seconds.	Pass
FT-09	Invalid Input Performance	Submit invalid or incomplete input values repeatedly.	Validation messages displayed without affecting performance.	System handled invalid inputs correctly.	Pass
FT-10	Overall System Performance	Perform all major application functions under normal workload.	System performs efficiently with stable response time.	All functions executed successfully without performance issues.	Pass
